

MOBILE DEVICES *Lock It Up!*

What is a Screen Lock?

A screen lock is a security feature that helps protect your mobile device in case you lose it or the device is stolen. A screen lock prevents an unauthorized individual from accessing your device by requiring a specific action to unlock it.

Examples of Common Screen Locks:

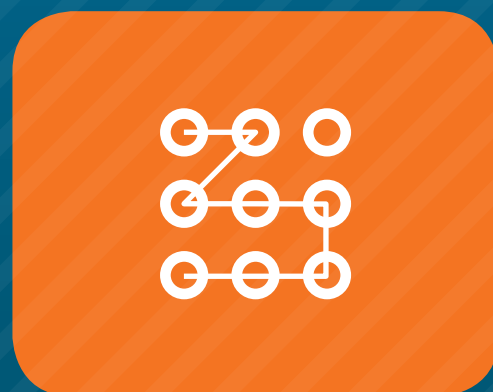

Password

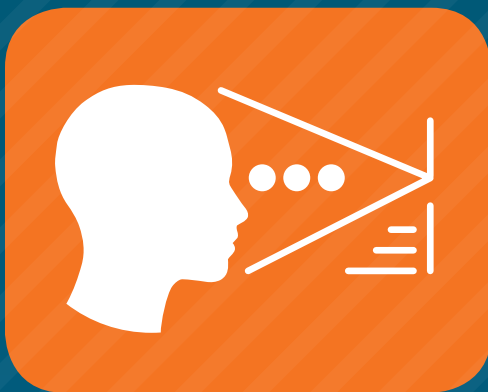

Numerical Code or PIN

Swipe Pattern

Facial Recognition

Fingerprint Scan

Tips

- Be sure to configure your screen lock so it automatically locks after a short period of inactivity.
- If you use a PIN, password, or swipe pattern, use one that is unique and hard to guess.

Did You Know?

Did you know that enabling a screen lock on your mobile device also enables encryption on most mobile devices today?

Enabling a strong, automatic screen lock greatly increases the security of your device if it is lost or stolen.
