

How to query Section Information (SSASECQ)

SSASECQ is a query form used primarily for identifying the CRN for one or many sections of a course. The form can be accessed using the Direct Access field or by clicking the drop arrow to the right of the CRN field in the key block of SSASECT. Queries can be formulated using any of the fields simply by entering the appropriate data and/or wildcard character and then executing the search command.

Initiating a query

From the key block of SSASECT, clicking the drop arrow for the CRN field

Screenshot of the SSASECT interface. The title bar reads "Schedule SSASECT 7.3.0.1 [1.20] (TRAIN7)". Below the title bar, there are two input fields: "Term:" with the value "200709" and a dropdown arrow, and "CRN:" with an empty input box and a dropdown arrow. The dropdown arrow for the CRN field is highlighted with a red box.

will open the form SSASECQ. Two records will display but you will only enter

Two instances of the SSASECQ query form are shown. The top form is highlighted with a red border. It contains the following fields:

- Term:
- Part of Term:
- Registration From:
- Registration To:
- CRN:
- Block Schedule:
- Subject:
- Course:
- Section:
- Section Status:
- Campus:
- Course/Section Title:
- Schedule Type:
- Instructional Method:
- Duration:
- Unit:
- Link:
- Cross List:
- Reserved Seats:
- Long:
- Syllabus:
- Comments:
- Enrollment: Maximum - Actual =
- Waitlist: Maximum - Actual =

A second instance of the SSASECQ query form is shown below the first one. It contains the same fields as the first form, but they are currently empty.

data in fields of the first record (highlighted in red).

How to query Section Information (SSASECO)

Query Example A search for all sections under the subject heading of Anatomy could be found by entering the subject code (ANAT or ANA%) in the subject field.

Term: 200709
Part of Term:
Registration From:
Registration To:
CRN:
Block Schedule:
Subject: ANAT
Course:
Section:
Section Status:
Campus:
Course/Section Title:
Schedule Type:
Instructional Method:
Duration:
Unit:
Link:
Cross List:
Reserved Seats:
Long:
Syllabus:
Comments:
Enrollment: Maximum - Actual =
Waitlist: Maximum - Actual =

In this example the query was initiated from the key block of SSASECT where the term (200709) had been entered, so the term was forwarded into the query form. An execution of this query would then yield the following result:

Term: 200709
Part of Term: 1
Registration From:
Registration To: 762
CRN: 762
Block Schedule:
Subject: ANAT
Course: 214
Section: 001
Section Status: A
Campus: 1
Course/Section Title: Systemic Human Anatomy
Schedule Type: A
Instructional Method: A
Duration:
Unit:
Link: A1
Cross List:
Reserved Seats:
Long:
Syllabus:
Comments:
Enrollment: Maximum 240 - Actual 0 = 240
Waitlist: Maximum 0 - Actual 0 = 0

Term: 200709
Part of Term: 1
Registration From:
Registration To: 763
CRN: 763
Block Schedule:
Subject: ANAT
Course: 214
Section: 002
Section Status: A
Campus: 1
Course/Section Title: Systemic Human Anatomy
Schedule Type: L
Instructional Method:
Duration:
Unit:
Link: L1
Cross List:
Reserved Seats:
Long:
Syllabus:
Comments:
Enrollment: Maximum 160 - Actual 0 = 160
Waitlist: Maximum 0 - Actual 0 = 0

All fields with available data are then populated for each record that matched the criteria set out in the search. Searches can be performed based on combinations of any of the fields. Obviously, the more criteria input, the greater the restrictions on matching results. In this case, there are more than two records, as indicated by the scroll bar handle's size. This example represents a broad search, but adding a course number would have restricted the results further, as would cross list codes, link codes schedule types, etc.

How to query Section Information (SSASECQ)

Queries initiated from another form

If the query is initiated from another form, Double clicking on any record will return that record to the originating form. In the example above, this would return the CRN number 762 to the key block of SSASECT where the query was initiated. If SSASECT was opened using Direct Access, then the search results cannot be returned to any other form automatically.

Additional queries

A query using SSASECQ can also be initiated from the Section number field of SSASECT by double clicking in this field. This can be useful if you wish to

Schedule SSASECT 7.3.0.1 [1.20] (TRAIN7)
